APPLICATION

The Golden Eye is the smallest scope of its kind in the world. This scope is no toy! In fact it took over 1 year of research and a super computer to design and build its internal microoptics. Now this incredible unit is available to you from ATN. Breaking all laws of physics, the Golden Eye is a technological marvel using revolutionary engineering with over 150 separate operations required to build this unit. The Golden Eye has over 27 individual parts and uses a series of 12 extremely complex lenses, specially coated to give you crystal clear 8x magnification. Shorter than your pinkie finger and weighing less than one ounce, it delivers superb optics at a fraction of the cost.

OPERATING

FOCUSING

To focus, look through the eyepiece at an object. Rotate the front lens until the object appears sharp and clear.

HOW TO CARE FOR YOUR MONOCULAR

A. When wiping the lenses of the monocular or the magnifier tube, use a soft, lintless cloth.

B. To remove any remaining dirt or smudges, add one or two drops of isopropyl alcohol to the cloth.

C. Store your monocular in a moisture-free area. Store unit in a way that will avoid scratching the magnifier tube.

VERY IMPORTANT

Never attempt to clean your monocular internally or try to take it apart.

CAUTION!
